

# Why are Christianity and Science moving further apart?

*New Release*

"Good faith, like good science, presupposes right thinking. But fewer and fewer people are learning to think rightly. This is a serious threat to us as Christians--and as humans. Anthony Rizzi offers our society the tools to restore clearer thought and deeper faith."

--Scott W. Hahn, Professor of Scripture and Theology at Franciscan University of Steubenville

"There is a pressing need for Anthony Rizzi's book, which reveals the link between science and man's deepest questions in a bold, clear and truthful way. His book is full of insights that readers will relish and want to read again and again to plumb their depths. I wish I had this book back when I was studying science in high school and college or when I was trying to apply science in my years as an engineer."

--Marcus Grodi, host of *The Journey Home*, EWTN

\$16.00 softcover plus s/h; \$24.25 hardcover plus s/h

**Anthony Rizzi (a distinguished physicist who solved an 80 year old problem in Einstein's theory) is a man of science and faith. In this readily accessible book, he makes clear that there is a necessary connection, established by God, between real science and true faith. Indeed, man cannot be who *he is made to be* without both, as a bird cannot fly without both wings.**

In this first-of-its-kind book, Rizzi responds to Pope John Paul II's call to reunite science and the Faith. John Paul II's encyclical *Fides et Ratio* calls for a return to sound reasoning with St. Thomas Aquinas as our model. The Holy Father identifies scientism, the misunderstanding of science, as a key cultural problem. Indeed, it is the intellectual root of our moral, political, and theological problems. Christ tells us "For this I was born, for this I came into the world, to testify to the truth." Pilate asked, "What is truth?" New discoveries of science cause people to ask this question with increasing urgency.

From his unique view as an accomplished scientist, Rizzi establishes firm footing for the reader to defend truth in our scientific culture, revealing the proper grounding for science and Faith. The reader journeys through fascinating territory in which solid answers to modern quandaries are laid.

What is a man? Does an animal think? Will a robot ever be able to think? Is it truly Galileo vs. St. Thomas? Are there an infinite number of universes? How do we as faithful Catholics discuss topics such as the Big Bang, time travel and evolution?

With the same keen eye, Rizzi re-presents St. Thomas's *certain* proofs for the existence of God. He uses modern examples and convincingly settles common modern difficulties. Throughout the book, Rizzi tackles thought-provoking questions like Einstein's query about whether God could have made a different universe...

- ▶ Be ready to answer modern critics of the Faith.
- ▶ Be ready to aid those struggling to believe but who have come to think science has disproved the Faith.
- ▶ Be armed with the full truth, which by its nature includes science and the Faith.
